
Normality check of per-image F2 differences (secondary test, images with landslides)
LR − Random forest
Shapiro p = 8.9e-16
LR + interactions − Random forest
Shapiro p = 5.0e-26
Decision tree − Random forest
Shapiro p = 4.6e-21
HGB − Random forest
Shapiro p = 2.2e-27
XGBoost − Random forest
Shapiro p = 2.2e-22
Per-image F2 difference
Theoretical normal quantile
Points far from the orange line = not normal, so the paired t-test is not appropriate; the Wilcoxon signed-rank test is used instead.
